Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This is a non-final Office Action for application number 10/671,863 Display Apparatus, filed on 9/29/03. Claims 1, 432 and 34-37 are pending. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/7/07 has been entered.

Claim Rejections - 35 USC § 102

Claims 8 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent No. 5549264 to West.

The patent to West discloses a display apparatus (10) having a base part (12), a monitor body (248), a body bracket (100) fixedly coupled to the monitor body, a slider (120, 122) connected with the body bracket, a guide rail (102) which is a pair of rails (either side of 102) provided in a pair to correspond to the guide rail to be engaged with the guide rail and to stand on the base part, and to guide the slider to slide thereon so as to move the monitor body up and down, at least one spiral spring (122) having an

Art Unit: 3632

elasticity enough to support weight of the monitor body, to extend and contract in response to a movement of the slider; and a ball bearing (128) unit provided between the guide rail and the slider.

Response to Arguments

Any of Applicant's arguments with respect to claims 8 and 11 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

Claims 1, 4-7, 14-32 and 34-37 are allowed.

Claims 9, 10, 12 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

With regards to claims 1 and 4-7, the reason is that the prior art does not disclose four accommodating parts for accommodating the springs and the guide rails on both sides of the guide bracket or a that a ball bearing unit is provided between the guide rail and the slider or wherein the spring supporting block performs a sliding motion along with the sliders. With regards to 4,616,218 to Bailey et al., the reference does not show any spring supporting block which is between and coupled to the sliders, the spring supporting block is on the outside of the sliders and is attached to the guide rails.

With regards to claims 9 and 10, the reason is that the prior art does not teach a supporting pin disposed between the guide rail and the slider and positioned along a

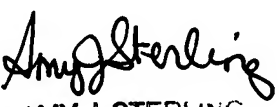

Art Unit: 3632

lengthwise direction of the guide rail and a rolling ball rollably installed on the supporting pin between the guide rail and the slider and contacted with the slider by a rolling motion.
